Helps readers move beyond the theory into the real world of radar design and analysis

Radar Systems Analysis and Design Using MATLAB does all this and more. Based on the philosophy that radar systems should not be difficult to understand or complicated to analyze and design, it focuses on radar fundamentals, principles, and rigorous but easy-to-follow derivations. Each chapter provides all the necessary mathematical and analytical coverage needed for understanding radar theory.

Among this book's most outstanding features is the integration of Matlab 5.0 functions and programs within each chapter to further enhance understanding of the theory and provide a source for establishing radar system design requirements. All of these functions and programs can be downloaded from the CRC Web site - saving users more than \$1,000 in acquiring similar software.

All of this plus nearly 1,300 equations, almost 300 illustrations, more than 200 examples and end-of-chapter problems, and six appendices means that Radar Systems Analysis and Design Using MATLAB meets all the criteria. Your search for the ideal resource for radar engineering is over.
