## **Quantum Control of Molecular Processes** Moshe Shapiro, Paul Brumer

Written by two of the world's leading researchers in the field, this is a systematic introduction to the fundamental principles of coherent control, and to the underlying physics and chemistry.

This fully updated second edition is enhanced by 80% and covers the latest techniques and applications, including nanostructures, attosecond processes, optical control of chirality, and weak and strong field quantum control. Developments and challenges in decoherence-sensitive condensed phase control as well as in bimolecular control are clearly described.

Indispensable for atomic, molecular and chemical physicists, physical chemists, materials scientists and nanotechnologists.
