Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing)

Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing)

Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing)

This book comprises a set of articles that specify the methodology of text mining, describe the creation of lexical resources in the framework of text mining and use text mining for various tasks in natural language processing (NLP). The analysis of large amounts of textual data is a prerequisite to build lexical resources such as dictionaries and ontologies and also has direct applications in automated text processing in fields such as history, healthcare and mobile applications, just to name a few. This volume gives an update in terms of the recent gains in text mining methods and reflects the most recent achievements with respect to the automatic build-up of large lexical resources. It addresses researchers that already perform text mining, and those who want to enrich their battery of methods. Selected articles can be used to support graduate-level teaching.

The book is suitable for all readers that completed undergraduate studies of computational linguistics, quantitative linguistics, computer science and computational humanities. It assumes basic knowledge of computer science and corpus processing as well as of statistics.

From reader reviews:

Alberta Sanchez:

As people who live in the actual modest era should be up-date about what going on or information even knowledge to make all of them keep up with the era that is certainly always change and make progress. Some of you maybe can update themselves by examining books. It is a good choice for you but the problems coming to you is you don't know which you should start with. This Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing) is our recommendation so you keep up with the world. Why, since this book serves what you want and wish in this era.

Katie Johnson:

Are you kind of hectic person, only have 10 or perhaps 15 minute in your day to upgrading your mind ability or thinking skill even analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your short period of time to read it because all of this time you only find book that need more time to be examine. Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing) can be your answer since it can be read by you actually who have those short free time problems.

William Powell:

Don't be worry when you are afraid that this book can filled the space in your house, you may have it in e-book approach, more simple and reachable. This kind of Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing) can give you a lot of buddies because by you taking a look at this one book you have matter that they don't and make anyone more like an interesting person. This book can be one of a step for you to get success. This publication offer you information that might be your friend doesn't realize, by knowing more than some other make you to be great folks. So , why hesitate? Let me have Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing).

Alexander Goodman:

That guide can make you to feel relax. This kind of book Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing) was multi-colored and of course has pictures on there. As we know that book Text Mining: From Ontology Learning to Automated Text Processing Applications (Theory and Applications of Natural Language Processing) has many kinds or category. Start from kids until adolescents. For example Naruto or Private investigator Conan you can read and think you are the character on there. Therefore , not at all of book tend to be make you bored, any it offers up you feel happy, fun and unwind. Try to choose the best book for you personally and try to like reading in which.
