Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra

Fundamentals of Mathematics represents a new kind of mathematical publication. While excellent technical treatises have been written about specialized fields, they provide little help for the nonspecialist; and other books, some of them semipopular in nature, give an overview of mathematics while omitting some necessary details. *Fundamentals of Mathematics* strikes a unique balance, presenting an irreproachable treatment of specialized fields and at the same time providing a very clear view of their interrelations, a feature of great value to students, instructors, and those who use mathematics in applied and scientific endeavors. Moreover, as noted in a review of the German edition in *Mathematical Reviews*, the work is "designed to acquaint [the student] with modern viewpoints and developments. The articles are well illustrated and supplied with references to the literature, both current and 'classical.'"

The outstanding pedagogical quality of this work was made possible only by the unique method by which it was written. There are, in general, two authors for each chapter: one a university researcher, the other a teacher of long experience in the German educational system. (In a few cases, more than two authors have collaborated.) And the whole book has been coordinated in repeated conferences, involving altogether about 150 authors and coordinators.

Volume I opens with a section on mathematical foundations. It covers such topics as axiomatization, the concept of an algorithm, proofs, the theory of sets, the theory of relations, Boolean algebra, and antinomies. The closing section, on the real number system and algebra, takes up natural numbers, groups, linear algebra, polynomials, rings and ideals, the theory of numbers, algebraic extensions of a fields, complex numbers and quaternions, lattices, the theory of structure, and Zorn's lemma.

Volume II begins with eight chapters on the foundations of geometry, followed by eight others on its analytic treatment. The latter include discussions of affine and Euclidean geometry, algebraic geometry, the Erlanger Program and higher geometry, group theory approaches, differential geometry, convex figures, and aspects of topology.

Volume III, on analysis, covers convergence, functions, integral and measure, fundamental concepts of probability theory, alternating differential forms, complex numbers and variables, points at infinity, ordinary and partial differential equations, difference equations and definite integrals, functional analysis, real functions, and analytic number theory. An important concluding chapter examines "The Changing Structure of Modern Mathematics."

From reader reviews:

Charles Dame:

In this 21st one hundred year, people become competitive in every single way. By being competitive today, people have to do something to make these people survive, being in the middle of the particular crowded place and notice by surrounding. One thing that sometimes many people have underestimated the item for a while is reading. Yeah, by reading a e-book your ability to survive boost then having chance to stand than other is high. For you who want to start reading some sort of book, we give you this kind of Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra book as beginning and daily reading e-book. Why, because this book is usually more than just a book.

Sammy Cheney:

Reading can be called brain hangout, why? Because if you are reading a book specially book entitled Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra your brain will drift away through every dimension, wandering in every aspect that maybe unfamiliar for but surely can be your mind friends. Imaging every word written in a guide then become one type conclusion and explanation that will maybe you never get just before. The Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra giving you yet another experience more than blown away your mind but also giving you useful data for your better life within this era. So now let us present to you the relaxing pattern at this point is your body and mind will likely be pleased when you are finished examining it, like winning a game. Do you want to try this extraordinary wasting spare time activity?

Robert Dougherty:

In this era globalization it is important to someone to acquire information. The information will make a professional understand the condition of the world. The fitness of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, classifieds, book, and soon. You can view that now, a lot of publisher which print many kinds of book. The book that recommended to you is Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra this book consist a lot of the information from the condition of this world now. That book was represented how can the world has grown up. The terminology styles that writer require to explain it is easy to understand. Often the writer made some study when he makes this book. This is why this book suited all of you.

Chad Davis:

Many people said that they feel fed up when they reading a publication. They are directly felt it when they get a half parts of the book. You can choose the actual book Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra to make your own reading is

interesting. Your skill of reading skill is developing when you like reading. Try to choose basic book to make you enjoy to read it and mingle the idea about book and reading through especially. It is to be 1st opinion for you to like to open up a book and learn it. Beside that the publication Fundamentals of Mathematics, Vol. 1: Foundations of Mathematics: The Real Number System and Algebra can to be your new friend when you're sense alone and confuse with what must you're doing of the time.
