Non Linear Time Theory: Successor to the Einstein Hologram Universe

Gregory M Friedlander

Non Linear Time Theory: Successor to the Einstein Hologram Universe Gregory M Friedlander

Non Linear Time Theory provides an intuitive approach to space, matter and force. NLT provides intuitive answers to what have been mysteries in prior theories. The list includes (1) the origin of space time, (2) the origin of quantum phenomena, (3) quantum time giving rise to quantum gravity, (4) the unified field relationship of gravity to other forces, (5) the origin of force, (6) the transitions of time dimensional coordinates to the different force and dimensional states we experience, (7) explanations of why we experience clock time (8) why it disappears at the speed of light, (9) the exponential growth of clock time concentration (10) the reasons for the perception of speed, (11) an explanation of why we can predict clock time 5, (12) wave-particle duality, (13) the successor of standard clock time that allow us to have self-awareness, and (14) the origins of what we have previously thought of as dark matter gravitational forces. Non linear time theory sets out to be an elegant, internally consistent theory of space time originally set out in vague terms in "The Einstein Hologram Universe." It would be radical, even implausible, were it not for string hologram theory. It is partially developed. The book was written originally to be a 15 page grant application for the purpose of finishing it. It is mathematically incomplete, but intuitively correct. It undermines self-determination, it either discloses or creates a universe so vastly different from anything we experience. It questions space and time, envisioning an environment where those limitations do not apply. This is vastly different from an environment where you can move about instantly or travel back and forth in time. This environment is one where time and distance have no existence. It is as if those two critical elements of our perception, space-time, were created for no reason other than our ability to perceive them. It suggests that we exist in the non-linear space and that our perception of a past and a future, of a here and there, are only illusion. It almost requires that every moment exists simultaneously with every other moment that every quantum point exists with every other quantum point. It suggests that our ability to manipulate our surroundings, to invent concepts of our surrounding, even our ideas of awareness are but an illusion. We do not think because we are, we think because in the world of non-linearity our entire existence is laid out for us. I can decide to write this and you can decide to read this, but it is a decision that is already made. The theory is as much a terror as a triumph.

From reader reviews:

Viola Coghlan:

The publication with title Non Linear Time Theory: Successor to the Einstein Hologram Universe has a lot of information that you can study it. You can get a lot of benefit after read this book. This book exist new information the information that exist in this e-book represented the condition of the world right now. That is important to you to learn how the improvement of the world. This kind of book will bring you with new era of the internationalization. You can read the e-book on your smart phone, so you can read it anywhere you want.

Ethel Fung:

Playing with family in a park, coming to see the water world or hanging out with buddies is thing that usually you may have done when you have spare time, after that why you don't try point that really opposite from that. A single activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Non Linear Time Theory: Successor to the Einstein Hologram Universe, you are able to enjoy both. It is fine combination right, you still wish to miss it? What kind of hang-out type is it? Oh come on its mind hangout folks. What? Still don't buy it, oh come on its referred to as reading friends.

Grady Comer:

Do you really one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Try to pick one book that you find out the inside because don't assess book by its handle may doesn't work the following is difficult job because you are scared that the inside maybe not as fantastic as in the outside appear likes. Maybe you answer can be Non Linear Time Theory: Successor to the Einstein Hologram Universe why because the great cover that make you consider with regards to the content will not disappoint you. The inside or content is fantastic as the outside or even cover. Your reading 6th sense will directly guide you to pick up this book.

Lloyd Schuler:

Some people said that they feel weary when they reading a guide. They are directly felt it when they get a half elements of the book. You can choose the particular book Non Linear Time Theory: Successor to the Einstein Hologram Universe to make your own personal reading is interesting. Your own personal skill of reading talent is developing when you like reading. Try to choose basic book to make you enjoy to learn it and mingle the opinion about book and reading especially. It is to be initially opinion for you to like to open up a book and read it. Beside that the book Non Linear Time Theory: Successor to the Einstein Hologram Universe can to be your brand-new friend when you're experience alone and confuse with the information must you're doing of their time.
