Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) Masaru Tomita

Parsing Efficiency is crucial when building practical natural language systems. This is especially the case for interactive systems such as natural language database access, interfaces to expert systems and interactive machine translation. Despite its importance, parsing efficiency has received little attention in the area of natural language processing. In the areas of compiler design and theoretical computer science, on the other hand, parsing algorithms have been evaluated primarily in terms of the theoretical worst case analysis (e.g. $O(N^3)$), and very few practical comparisons have been made. This book introduces a context-free parsing algorithm that parses natural language more efficiently than any other existing parsing algorithms in practice. Its feasibility for use in practical systems is being proven in its application to Japanese language interface at Carnegie Group Inc., and to the continuous speech recognition project at Carnegie-Mellon University. This work was done while I was pursuing a Ph.D degree at Carnegie-Mellon University. My advisers, Herb Simon and Jaime Carbonell, deserve many thanks for their unfailing support, advice and encouragement during my graduate studies. I would like to thank Phil Hayes and Ralph Grishman for their helpful comments and criticism that in many ways improved the quality of this book. I wish also to thank Steven Brooks for insightful comments on theoretical aspects of the book (chapter 4, appendices A, B and C), and Rich Thomason for improving the linguistic part of the book (the very beginning of section 1.1).

From reader reviews:

Adriana Cornell:

Hey guys, do you desire to find a new book to read? Maybe the book with the concept Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) suitable to you? The particular book was written by a popular writer in this era. The actual book entitled Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) is the one of several books that will everyone read now. This book was inspired many people in the world. When you read this e-book you will enter the new dimension that you ever know ahead of. The author explained their strategy in the simple way, and so all of people can easily to understand the core of this guide. This book will give you a lots of information about this world now. In order to see the represented of the world on this book.

Jose Johnson:

Exactly why? Because this Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) is an unordinary book that the inside of the publication waiting for you to snap the item but latter it will surprise you with the secret the idea inside. Reading this book alongside it was fantastic author who have write the book in such remarkable way makes the content within easier to understand, entertaining approach but still convey the meaning completely. So , it is good for you because of not hesitating having this ever again or you going to regret it. This amazing book will give you a lot of gains than the other book possess such as help improving your skill and your critical thinking means. So , still want to hold off having that book? If I had been you I will go to the guide store hurriedly.

David Saenz:

Reading can called head hangout, why? Because if you are reading a book particularly book entitled Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) your brain will drift away trough every dimension, wandering in every aspect that maybe mysterious for but surely can be your mind friends. Imaging every word written in a publication then become one form conclusion and explanation that will maybe you never get prior to. The Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) giving you yet another experience more than blown away your thoughts but also giving you useful info for your better life within this era. So now let us present to you the relaxing pattern at this point is your body and mind is going to be pleased when you are finished examining it, like winning a. Do you want to try this extraordinary paying spare time activity?

Haydee Todd:

That reserve can make you to feel relax. This book Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) was colourful and of course has pictures on the website. As we know that book Efficient Parsing for Natural Language: A Fast Algorithm for Practical Systems (The Springer International Series in Engineering and Computer Science) has many kinds or variety. Start from kids until youngsters. For example Naruto or Private eye Conan you can read and believe you are the character on there. So , not at all of book are generally make you bored, any it can make you feel happy, fun and rest. Try to choose the best book for you personally and try to like reading that.
